June 2011

NEW WEBSITE LAUNCH

We are pleased to announce the launch of our new Aquatech website. The motivation for redesigning our website is to demonstrate the growth and focus we have experienced as well as showcase the areas we will continue to strive for moving forward. The new website brings together Aquatech's unique and specialized ability built around our standard of service and the strength of our diversified rental and sale pumping fleet.

As you navigate through the site, you will see new areas of focus such as the **"How Do You..."** section catered to share and educate our industry on Best Management Practices (BMPs), the **Solutions** section that emphasizes various solutions using case studies catered to different clients within our industry, the **Pump Service** section that will continue to grow as our Service Department continues to grow as well as a **Sign Up** for our monthly newsletter to keep in touch with what's happening in the industry.

If you have any questions or comments, feel free to contact us at (905) 907-1700 or email us at info@aquatd.com.

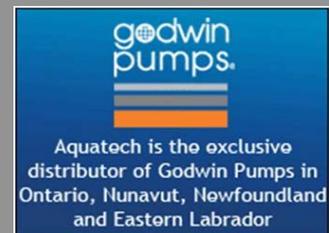

What's New!

Mine Dewatering - The real value of the pumps selected is in the support that comes with them

Every industry has them. When specifically referring to the mining industry, the use of a specialized pumping company that not only supplies equipment, but also understands and provides the support required can play an integral component to the success of a project. This is especially true when working in remote northern areas where down time can and has had serious cost and

schedule implications. Dewatering is a significant engineering design and critical path component, and represents an on-going operational cost for open pit mining operations.

PUMP IT UP - Canadian contractor Aquatech scrambles expert emergency teams and a wide array of job-specific equipment to drive a growing dewatering service in the mining sector

Aligning itself with a major equipment supplier and dealer helps the company access the tools and expertise it needs without risking too much capital. Aquatech is the distributor of Godwin Pumps of America in Ontario, Nunavut, Newfoundland and Eastern Labrador, all resource-rich territories. A recent purchase of Godwin by ITT Corporation has expanded the lineup of mine sector pumps. The company is

also a distributor of Hudig Pumps throughout Canada and the U.S., which has given Aquatech access to its oilless diesel and electric pumps for environmentally sensitive applications.
